

NOVi[®]

GENIE edge[™]

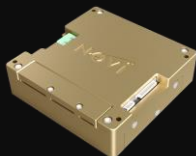

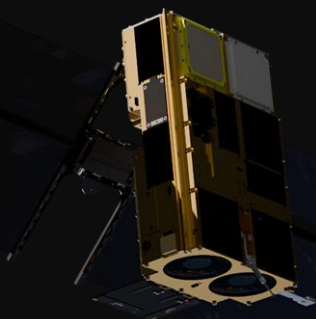

Validate. Deploy. Operate.

Your Software On-Orbit Today

Bring Your Software to Orbit

Software Operations at the “Space Edge”

NOVI’s smart satellites are all equipped with our advanced SP240 on-board computers, enabling software processing in-orbit for a broad range of applications. NOVI’s full end-to-end operations provides the complete platform for developing, validating, demonstrating, and ultimately operating partner and customer software products in-orbit.

NOVI's SP240 OBC
on every satellite

Why choose NOVI for in-orbit computing?

Low Cost and Rapid Turnaround Accelerate your path to TRL 9 with demonstrated flight heritage.

Dedicated Operations Support Quickly iterate, update, test and deploy your software with technical and operations support from NOVI’s team.

Low Risk Validation Develop and validate your software on NOVI's flight-equivalent ground emulator before seamless deployment to orbit.

Start your mission

1. Establish NDA and define scope
2. Develop and package your product using NOVI’s Software Development Kit (SDK)
3. Validate performance in NOVI’s ground-based operational emulator
4. Deploy to orbit, demonstrate and operate
